Are Powder Free Gloves Completely Powder Free?

Due to the different manufacturing processes of powder free gloves, they are not 100% completely powder free. (FYI—Some type of powder is needed to release the glove from the hand forma (mold).) The definition of powder according to the ASTM is anything that does not pass through a 2.7 micrometer glass microfiber filter by using suction filtration. These may include cornstarch, calcium carbonate aggregates, latex particles, synthetic debris, packaging fibers, non-soluble lubricants, dust, etc. However, ASTM has set a maximum limit for powder at 4 mg per glove for all powder free gloves, and plans to further reduce the limit to 3 mg in the future, and then to 2 mg per glove.

Check out our website for answers to many glove related questions. You should look at the [FAQ section](#) and especially our [Glossary](#). Brushing up on questions and answers from our web site, may just be what the doctor ordered when it comes to increasing your sales and enhancing your profits.

After all, gloves, though they may be a commodity, can still allow you to provide expert answers to even a professional's questions while you are in the field, on the phone or simply answering an e-mail from a customer.

QUALITY IS EVERYTHING

Whether it comes to our medical, dental, food service or even our general purpose gloves, at Omni International, it's not good enough to be just another "glove". Since gloves is ALL we do, it is imperative that Omni International's gloves adhere to very high standards.

One thing you should note is that all Omni Gloves are packed in layers for easy dispensing. We know that may not mean much to you or some of your customers. However, it should. It is very important to us and most of your customers. They want a glove that is properly packaged in the box so that when they pull a glove out, only one glove is dispensed.

You probably have seen a movie called "The Blob". Imagine, all the gloves in a box literally morphed into a "blob" of their own. We know you have seen a box resembling that visual!

Layered packaging is very important when it comes to customer satisfaction. It means more savings for them as they only pull out what they need rather than extra's falling on the floor, or worse yet, "blobs" attacking!

With Omni Gloves you get a high quality glove that is layered correctly, just like tissues, so that your customer only pulls out one at a time, with confidence.
