An Omni Nitrile Product Improvement

Omni International has been very successful in growing our nitrile glove product line. Over the past few years, we have narrowed the field to two extremely popular gloves, our #202 Lite Touch Glove and our "Comfort Formulation (CF) #212.

The 202 Lite Touch has been in Omni Distribution Centers for about 4 years now. It has shown immense growth among professional and industrial customers alike.

However, this month we want to talk about the Comfort Formulation #212 Nitrile glove. The CF Nitrile has also been with us for many years now. As most of you know it, this product provides excellent donning capabilities, is a great "wear" (according to user customers), has an extremely high chemical compatibility rating (use with high powered solvents, chemicals, etc.), and is Chemotherapy Drug use rated. It is a phenomenal multi-use product!

In an attempt to enhance the comfort of the glove while also maintaining its protective properties, we have taken a new step forward and have slimmed down the glove thickness a bit. We are extremely pleased with the result as now we are able to offer one of the slimmest gloves with the highest protective qualities on the market today! That makes it extremely popular in both the medical/dental (professional) as well as our industrial version.

One of the biggest reasons for our decision to slim this popular glove down, was the ability of our manufacturer to remove the accelerators from the product compound. Accelerators are part of the chemical make up of most nitrile gloves which helps them bond quickly while on the former (hand mold) as it goes through the manufacturing

process. However, reports have shown that some individuals will react to the accelerator chemicals similar to latex allergy reactions. Therefore, the removal of accelerators helps to significantly reduce allergy risk even further.

After careful research, we felt the advantages to having a thinner, accelerator free glove as part of our new CF Comfort Formulation Nitrile Glove from Omni (#212) allowed us to offer something that most gloves of similar thickness can't – a truly higher level of comfort and protection for the wearer.

Current users will love the feel this next generation product offers. Dentists and their staffs have marveled about how this already great glove is now even better! Medical professionals likewise agree. Even EMS and police agencies, who typically prefer heavier gloves, like the more precise touch our new #212 glove offers. Even though the original CF Nitrile was very popular, the ability to grip IV catheters, scalp vein sets, blood collecting tubes, etc. has greatly been enhanced. And of course, the wearer really likes the extra protection they receive with the #212 CF Nitrile glove.

Our industrial customers who use this glove— anywhere from food service, high chemical janitorial applications or even in the toll booth have endorsed this new generation of CF Nitrile gloves.

Omni container distributors have seen this glove arrive over the last few weeks. Our new inventory has arrived and will be rotating into our distribution center shipments in the next few weeks.

Ask your representative or customer service for a sample of the next generation #212 glove. We know you'll be as impressed as those who are already buying them.
