## Stretch Vinyl Gloves

Since many of you have been requesting ideas to convert away from latex gloves, we thought we would continue our information series on latex alternative gloves.

In general, vinyl gloves provide flexibility and natural fit without the risk of allergic reactions to latex proteins. Our Stretch Vinyl gloves are manufactured of virgin PVC resins, and offer great flexibility for a wide variety of applications. Vinyl gloves, for example, withstand some chemicals and industrial cleaners better than some latex gloves.

Vinyl gloves are a great choice for individuals seeking an alternative to latex. And, with the increased prices of latex, Vinyl gloves have experienced a strong following from those concerned about worker safety and the liability issues currently surrounding latex allergies. All vinyl examination gloves must now achieve the standard AQL level of 2.5.

A glove Omni International has manufactured for years now is our **OmniTrust™ Vinyl Powder Free - #412** Stretch Vinyl Comfort Formulation (CF) gloves. This is an excellent non-latex value. A powder free, non-latex, stretch vinyl Comfort Formulation glove. OmniTrust™ Vinyl

CF Medical Examination Gloves are formulated for maximum comfort and more tactile sensitivity than our traditional vinyl glove. They are DOP/DEHP (di-octyl-phthalate / di-2-ethylhexyl phthalate) free and safe for use in medical, multi-purpose and food service applications.

In addition, our non-medical series of this stretch vinyl glove is available with our exclusive AMS anti-microbial technology. This not only is a huge value to the appropriate customer, but it also makes the glove even softer and more comfortable to wear.

All **OmniTrust™**, **OmniShield™** and **OmniSafe™** vinyl gloves are flat packed for optimum dispensing. Available in sizes Small through Extra Large

**Ordering Information.** Packaged 100 per box, 10 boxes per case, 1,000 gloves per case.

- #412-01 SMALL,
