

TPE Gloves

The Thermoplastic Elastomer Glove (TPE) is a cost saving product when compared to traditional vinyl food service gloves. They maintain more durable strength than CPE and Poly gloves, yet offer affordability when compared to vinyl.

A TPE glove is a great product to use in assembling or distributing food on the line where little to no heat is used: assembly of sandwiches, serving and other food oriented applications. Used as an alternative to vinyl gloves, the TPE gloves provide a better hand conformity than CPE or Poly gloves in the workplace. Packed in several custom set-ups, we offer the below configuration from our Distribution Centers. Available in small, medium, large and extra-large sizes.

Features & Benefits

- Alternative to Vinyl Gloves
- Safe to Use With Food
- Nice, Soft Fit
- California Proposition 65 Compliant
- Powder Free & Smooth
